### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Morton Rosenberg on 9/26/05.

The application has been amended as follows:

In claim 1, line 11, "; a logo printed on the" has been changed to --, in combination with a source of heat-shrinkable film having a logo thereon, said--, in line 12, "(" and ")" have been deleted, in lines 12-13 "at where required" has been deleted, in line 13, "and" has been changed to --whereby--, and "merely falling" has been changed to --falls--, and in line 14, "being" has been changed to --are--.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or fairly suggest a device for positioning the label on a square bottle made of two sections wherein the upper section is capable of revolving relative to the bottom section to adjust its angle and be secured therein so that the folding marks on the label fall on the corners of the bottle in combination with a heat-shrinkable film. In combination with a heat-shrinkable film requires the material worked upon, the heat-shrinkable film, to be part of the claimed device. While Hannen et al.(U.S. Publication

Art Unit: 1733

2004/0112016) suggests applying the label to the bottle so that the folding marks fall on the corners of the bottle,(Figure 6) it does not suggest how this is done. Fujio(U.S. Patent 4,016,704) and Smith(U.S. Patent 4,102,728) both show a device with a flattened wedge at the top which opens a label to apply to a bottle. While Fujio shows a conical upper section(22; Figure 1), it does not show this is movable relative to a lower section. Smith shows applying a label to a rectangular bottle, but the upper(120) and lower(129) sections are not conical or cylindrical, the sections of the device are not capable of revolving relative to one another, and the folds from the label do not fall on the corners of the bottle(Figure 4). While Konstantin et al.(U.S. Patent 4,765,121) shows two sections of the label opening device connected to each other by a screw(45), these are not upper and lower section which are respectively conical and cylindrical(9, Figure 2) but rather connect flat plates(42,43) to the rollers(12,13) which hold the label in place on the device. This connection does not allow movement of the conical section relative to the cylindrical section since Konstantin shows they are a single piece(9, Figure 2)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
